

Technical Rider

DJ performance · Venue-supplied equipment · Production advance

Overview

Piccaya performs DJ sets ranging from downtempo and organic selections to progressive, melodic and minimal dancefloor music. The organiser supplies the complete DJ setup and the sound system. Please confirm the final equipment list with Piccaya before the event.

DJ booth and playback

Media players	Two professional, USB-compatible DJ media players with reliable cueing and pitch control. Exact models and any substitution must be agreed in advance.
Mixer	One professional DJ mixer with at least two stereo input channels, channel EQ, headphone cueing and a working crossfader or channel faders. Confirm model and available connections in advance.
Monitoring	Two independently controllable booth monitors, one on each side of the DJ position, clearly audible above the main system.
Booth	A stable, level, sheltered DJ table with safe cable routing, suitable lighting and enough space for the supplied setup and two USB drives.

Sound and production

PA system	A professionally installed and operated stereo system appropriate to the room, audience and music programme, with reliable low-frequency coverage.
Signal path	Venue crew to connect the mixer to the PA and monitors, test both channels and keep a technician available during changeover and the performance.
Outdoor events	Weather protection for equipment and booth; a safe power supply and a contingency plan for rain, wind and dust.

Advance and soundcheck

Please share the DJ equipment models, booth dimensions, stage position, PA and monitoring details, and the production contact before confirming the technical plan. Allow time for a line check and a short playback test before doors or before the set changeover.

Player and mixer models, backup arrangements, booth layout and technical timings must be agreed with Piccaya in advance.
